The VSC iPhone mobile client was developed to provide telecom service operators (TSO) the opportunity to offer their retail VoIP services to their iPhone customers.

The VSC iPhone client can be provided with a customized skin displaying the TSO's logo and/or service name for brand building.

The customized iPhone mobile client is distributed through the Apple Apps Store making it readily available to the TSO's customers.

The VSC iPhone client offers choice of using a recharge card account purchased through existing distribution channels or for the user to recharge their account through the Apple store while online from their iPhone for convenience and immediate recharge.

A series of screens are provided offering a rich array of user features. All user screens are available from the Dialer screen

The VSC dialer supports IDD calls and calls to other VSC dialer phones. The VSC dialer will utilize WiFi if available and connected or can use the mobile phone service when there is no WiFi available.   Compatible with iPhone 4, 4S and iPad running iOS v4.1 or later

Summary of Features
